

Empathy Map Canvas

Date	19 June 2026
Team ID	2023011032040
Project Name	AI based threat intelligence platform
Maximum marks	30

Persona: Security Analyst at ABC Corporation

THINK & FEEL • Overwhelmed by the volume of data ('alert fatigue') • Stressed by the sophisticated nature of adversaries • Frustrated by manual data aggregation	SEE • A highly dynamic cybersecurity landscape with persistent threats • Disjointed data across different security tools (SIEM, firewalls, endpoint protection)
HEAR • Reports of new phishing attempts, ransomware, and insider threats • Pressure from management to proactively mitigate risks	SAY & DO • Manually monitor network traffic, system logs, and endpoint activities • Try to identify anomalous behavior and indicators of compromise (IOCs)
PAIN • Fears of missing critical threats due to alert fatigue • Frustrations with manual, time-consuming data correlation • Obstacles in responding quickly to sophisticated attacks	GAIN • Wants real-time alerts and automated data correlation • Needs predictive analytics to catch trends early • Measures success by a unified dashboard for easier decision-making

Problem Statement (The 5 W's)

Security Analysts at ABC Corporation (**Who**) are currently struggling to efficiently detect and respond to sophisticated cyber threats (**What**) across the organization's network and infrastructure (**Where**). As cyber attacks become more persistent and dynamic (**When**), analysts face alert fatigue and delayed response times due to manual data aggregation,

highlighting the need for an AI-driven platform to automate correlation and prioritize real-time threats (**Why**).
