

Project Development Phase

Performance Testing - Data Analytics

Date	19 June 2026
PRN	2023011032040
Project Name	AI-Based Threat Intelligence Platform
Maximum Marks	10 Marks

Data Analytics Performance Testing:

Project team shall fill the following information in the performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Dashboard design	No of Visualizations / Graphs - 8 (Includes Global Threat Map, Live Alert Feed, Risk Severity Gauge, TTP Distribution Chart, and Network Traffic Volume. Built using D3.js and React) [Insert Dashboard UI Screenshot Here]
2.	Data Responsiveness	Sub-second rendering times (< 800ms) for UI components. Real-time alert websocket latency is under 50ms, ensuring security analysts see threats instantly. [Insert Network Tab / Loading Time Screenshot Here]
3.	Amount Data to Rendered (DB2 Metrics)	Rendering 10,000+ active threat log rows per dashboard load. Average database query execution time is 45ms for historical threat data aggregations. [Insert DB Query

		Performance Screenshot Here]
4.	Utilization of Data Filters	Active filters implemented for: Date Range, Threat Severity Score (1-100), Attack Vector (Malware, Phishing, Ransomware), and Target Endpoint. Filtering updates visual components in < 300ms. [Insert Applied Filters Screenshot Here]
5.	Effective User Story	No of Scene Added - 4 (1. Main SOC Overview Scene, 2. Threat Drill-down Analysis Scene, 3. Actor Profile Scene, 4. Mitigation Playbook Scene) [Insert Multi-Scene Navigation Screenshot Here]
6.	Descriptive Reports	No of Visualizations / Graphs - 5 (Includes historical attack trends, mitigated threats, and vulnerability exposure graphs generated for weekly PDF/CSV executive reports) [Insert Exported Report Screenshot Here]
