

Project Development Phase

Model Performance Test - VAPT

Date	19 June 2026
PRN	2023011032040
Project Name	AI-Based Threat Intelligence Platform
Maximum Marks	10 Marks

Model Performance Testing:

Project team shall fill the following information when working for VAPT testing for a target.

S.No.	Parameter	Values	Screenshot
1.	Information gathering	Footprinting - Conducted via WHOIS lookups, DNS enumeration, and OSINT gathering using Maltego to map the target's external attack surface. Reconnaissance - Nmap stealth scans utilized to identify open ports and services on the target network perimeter.	[Insert Footprinting/Nmap Scan Screenshot Here]
2.	Scanning the target	Scanning info - Nessus vulnerability scanner deployed against target endpoints. Identified outdated Apache server versions and unpatched Windows OS instances. Risk factors - High Risk: CVE-2021-41773	[Insert Nessus Scan Results Screenshot Here]

		(Apache Path Traversal). Medium Risk: SMB Signing disabled.	
3.	Gaining access	Access process - Exploited the identified Apache Path Traversal vulnerability using a custom Python script, granting restricted shell access. Escalated privileges using a known local exploit. Vulnerability found - Remote Code Execution (RCE) via path traversal and weak local service permissions.	[Insert Exploitation/Shell Access Screenshot Here]
4	Maintaining access - Automation (AI implementation)	AI tools used - Deployed an AI-driven persistent backdoor model designed to mimic normal user behavior, avoiding detection by standard signature-based IDSs. Automation implemented - Automated C2 (Command and Control) beaconing with randomized timing and encrypted payload delivery to maintain access stealthily.	[Insert C2 Communication/Automation Screenshot Here]
5	Covering Tracks & Report	Vulnerability risk factors - The organization's risk exposure is critical due to	[Insert VAPT Report Summary Screenshot Here]

		internet-facing unpatched servers. Immediate patching and network segmentation are required. VAPT report - Comprehensive VAPT report generated detailing the attack vector, TTPs used, and actionable mitigation strategies, mirroring the output of the Threat Intelligence Platform.
